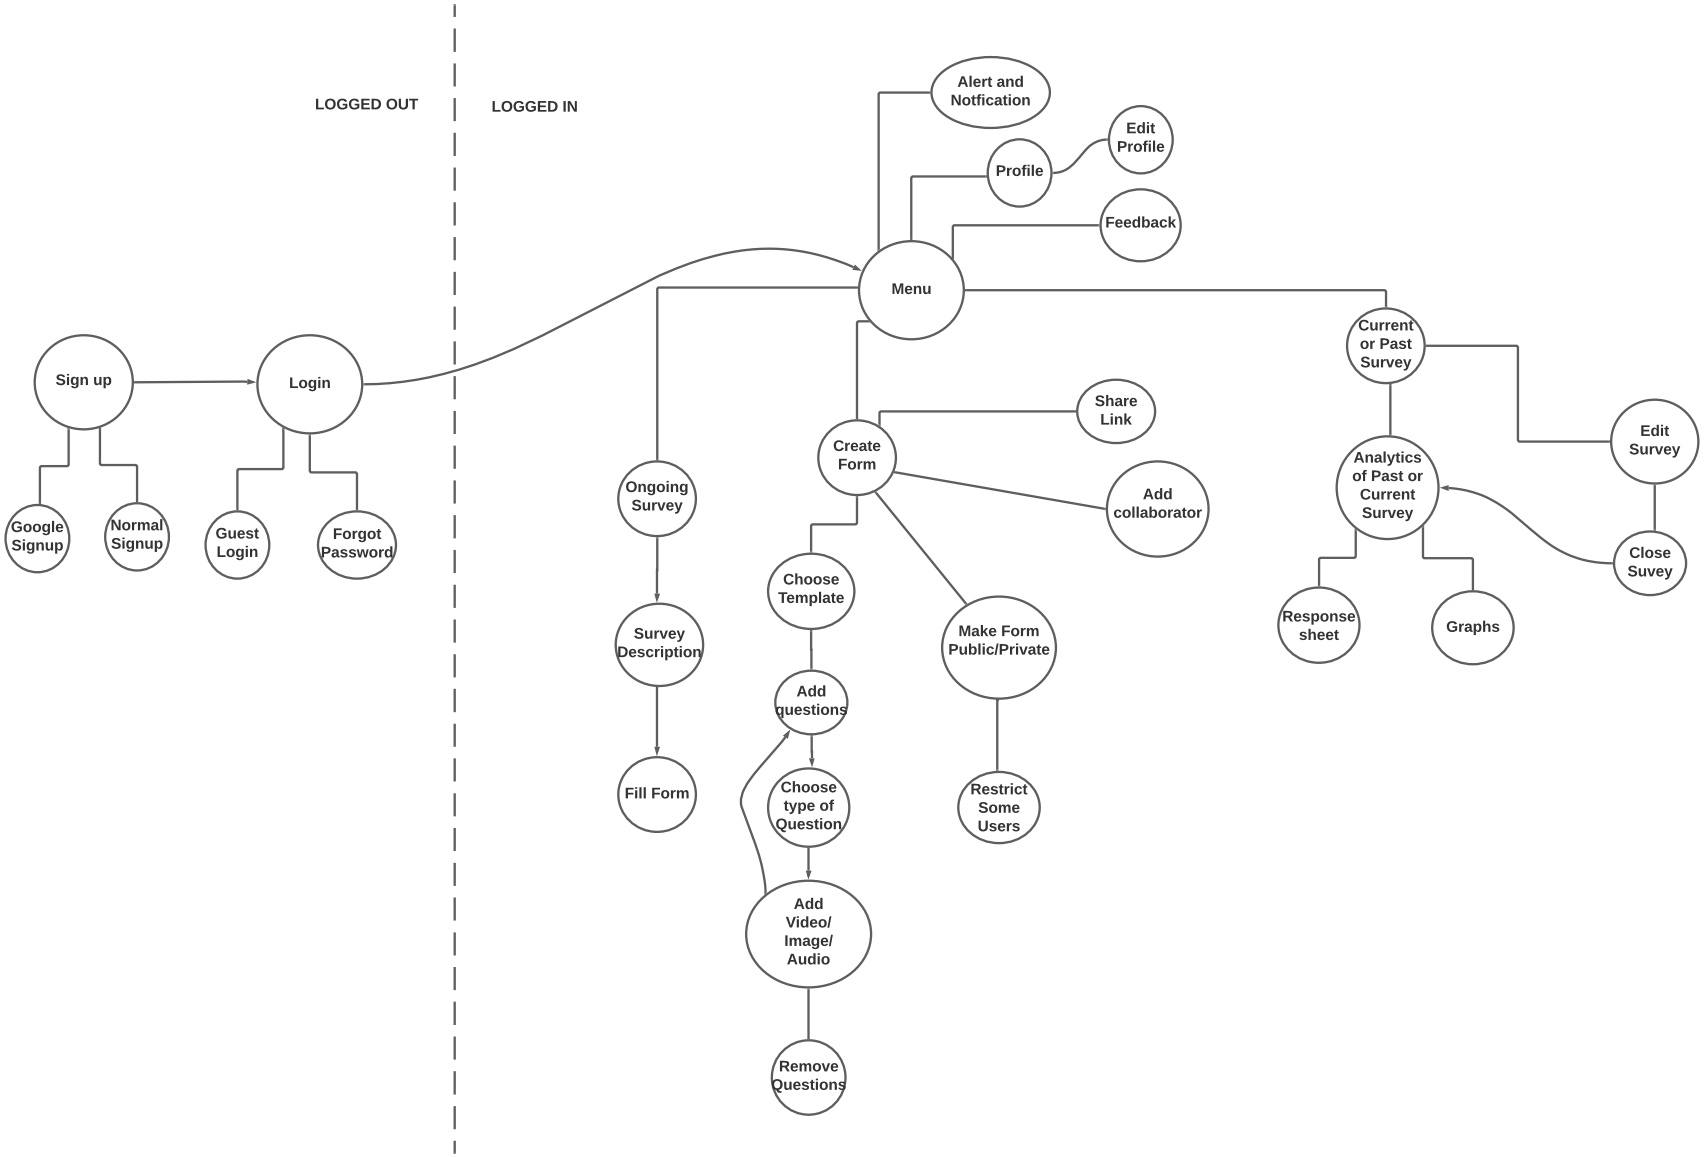
Lab Session IV: Software Requirements Elicitation

Group 16

Draw concept maps for your course projects.



❖ Identify Stakeholders, Actors and Use Cases for your course projects.

- Stakeholder
    - Surveyor
    - User
    - Developer
- Actors
    - Surveyor.
    - User.
    - Backend server.
    - Google authentication server.
- Use Cases
    - Surveyors can create a new form.
    - Surveyors can edit forms.
    - Surveyors can add collaborators to the form.
    - Surveyor will get a response sheet of each user, and will also get a detailed report which will include graphs.
    - Users and surveyors can change details of their profile.
    - Both surveyor and users can login through their google account.
    - Users and surveyors will get notifications when someone invites them to fill form or when someone adds them as collaborators.
    - Restrict certain users from filling out forms.
    - Surveyors can share the link of the form that s/he has created.
    - Surveyors can make the form public or private.
    - Users can fill forms, they can either be invited by the surveyor or can fill a public form.
    - Surveyors can close the survey at any point of time, after its creation.
    - Any user can give feedback on the survey system.
